freeboard or one-third of the draft, whichever is less, may be immersed.

- (7) In no case may the angle of heel exceed 14 degrees.
- (e) The limits of heel must be measured at:
- (1) The point of minimum freeboard; or
- (2) At a point three-quarters of the vessel's length from the bow if the point of minimum freeboard is aft of this point.
- (f) When demonstrating compliance with paragraph (d) of this section, the freeboard must be measured as follows:
- (1) For a flush deck or well deck vessel, the freeboard must be measured to the top of the weatherdeck at the side of the vessel: and
- (2) For a cockpit vessel or for an open boat, the freeboard must be measured to the top of the gunwale.
- (g) A ferry must also be tested in a manner acceptable to the cognizant OCMI to determine whether the trim or heel during loading or unloading will submerge the deck edge. A ferry passes this test if, with the total number of passengers and the maximum vehicle weight permitted on board, the deck edge is not submerged during loading or unloading of the vessel.

[CGD 85-080, 61 FR 966, Jan. 10, 1996; 61 FR 20557, May 7, 1996, as amended at 62 FR 51356, Sept. 30, 1997; 62 FR 64306, Dec. 5, 1997; USCG-2007-0030, 75 FR 78088, Dec. 14, 2010]

§ 178.340 Stability standards for pontoon vessels on protected waters.

(a) A pontoon vessel meeting the applicability requirements of §178.320 of this part must be in the condition described in §178.330(a) of this part when

the PSST is performed, except that fuel, water and sewage tanks should either be empty or filled to 100 percent capacity, whichever is more conservative.

(b) A pontoon vessel must not exceed the limitations in paragraph (c) of this section when subjected to the greater of the following heeling moments:

 $M_{pc} = [(W)(B_p - K)]/2; \text{ or }$

 $M_{w} = (P) (A) (H)$

Where:

- M_{pc} = passenger and crew heeling moment in foot-pounds (kilogram-meters);
- W = the total weight of passengers and crew aboard (total test weight) in pounds (kilograms):
- B_p = the maximum transverse distance of the deck accessible to passengers in feet (meters):
- K = 2.0 feet (0.61 meters);
- M_w = Wind heeling moment in foot-pounds (kilogram-meters)
- P = Wind pressure of 7.5 pounds/square foot (36.6 kilograms/square meter);
- A = Area, in square feet (square meters), of the projected lateral surface of the vessel above the waterline (including each projected area of the pontoons, superstructure and area bounded by railings and structural canopies): and
- H = Height, in feet (meters), of the center of area (A) above the waterline, measured up from the waterline.
- (c) With the appropriate heeling moment applied to the most adversely affected side of the vessel, the remaining exposed cross-sectional area of the pontoon must be equal to or greater than both—
- (1) The cross-sectional area submerged due to the load shift (for an example, see Figure 178.340(c)(1) of this section); and

Figure 178.340(c)(1)

PSST TRANSVERSE STABILITY

Area A = pontoon cross-sectional area above W2L2 Area B = pontoon cross-sectional area between W1L1 and W2L2

With load in outboard position (Position 2), Area A must be equal or greater than both Area B and ¼ of the cross-sectional area of one pontoon.

- (2) One-quarter of the cross-sectional area on one pontoon.
- (d) A pontoon vessel must also be tested to determine whether trimming moments will submerge the bow or stern of the buoyant hull. The top of any pontoon must not be submerged at

any location, as indicated in Figure 178.340(d) of this section, with the total test weight (W) located on the centerline and positioned as far forward or aft on the deck as practicable, whichever position results in the least freeboard.

Coast Guard, DHS § 178.420

Figure 178.340(d)

PSST LONGITUDINAL STABILITY VCG = 30 inches above the deck ШШ (Position 3) (Position 1;) (Position 4) LΔ (1 .1 1 Side View Top View W1L1 = Waterline for test load on C.L. and distributed to reproduce operating trim of the vessel. (Position 1)

W3L3 = Test weight moved to the extreme aft position from

Position 1. (Position 3)

W4L4 = Test weight moved to the extreme forward position from

Position 1. (Position 4)

With the test load at the extreme aft position (Position 3) and at the extreme forward position (Position 4), the top of the pontoon must not be submerged.

Subpart D—Drainage of Weather Decks

§178.410 Drainage of flush deck vessels.

- (a) Except as provided in paragraph (b) of this section, the weather deck on a flush deck vessel must be watertight and have no obstruction to overboard drainage.
- (b) Each flush deck vessel may have solid bulwarks in the forward one-third length of the vessel if:
- (1) The bulwarks do not form a well enclosed on all sides; and
- (2) The foredeck of the vessel has sufficient sheer to ensure drainage aft.

[CGD 85-080, 61 FR 966, Jan. 10, 1996, as amended at 62 FR 51357, Sept. 30, 1997]

§ 178.420 Drainage of cockpit vessels.

- (a) Except as follows, the cockpit on a cockpit vessel may be watertight:
- (1) A cockpit may have companionways if the companionway openings

have watertight doors, or weathertight doors and coamings which §179.360 of this subchapter.

- (2) A cockpit may have ventilation openings along its inner periphery if the vessel operates only on protected or partially protected waters.
- (b) The cockpit deck of a cockpit vessel that operates on exposed or partially protected waters must be at least 255 millimeters (10 inches) above the deepest load waterline unless the vessel complies with:
- (1) The intact stability requirements of §§ 170.170, 170.173, 171.050, 171.055, and 171.057 in subchapter S of this chapter;
- (2) The Type II subdivision requirements in §§ 171.070, 171.072, and 171.073 in subchapter S of this chapter; and
- (3) The damage stability requirements in §171.080 in subchapter S of this chapter.
- (c) The cockpit deck of a cockpit vessel that does not operate on exposed or partially protected waters must be located as high above the deepest load waterline as practicable.
